

EXECUTION

1. The ZOPE server must be started. The folder called 'code' must be copied to the Desktop of the computer on which the middle layer files will be executed. The xmlrpc connection string must be changed in the following files (Middle_Layer_Code folder):

- ADD_F.py
- BEProcessing.py
- class_middle_server.py
- func_add_server.py
- Intermediate.py
- WriteF2C.py (in the file.write statement)

2. The following files (Middle_Layer_Code folder) must be executed at the terminal, probably within different tabs:

- ADD_F.py
- BEProcessing.py
- class_middle_server.py
- func_add_server.py
- batch1.py
- server.py
- server2.py

These files must continuously run the background

3. Finally the FrontEnd folder must be copied to the computers in the network and page1.py must be executed to view and test the various options such as execution and creation of functions or classes or flow.
